FamilyVault — Sprint 6 Final Check-Up & Release Gate

Zero-Feature Quality Hardening, Cross-Tenant Security Audit & Production Release Gate v1.0.0 • Generated October 01, 2026 • Target: main (v1.0.0)

Sprint Mandate: Zero Feature Additions • Pure Quality	**Lead Architect:** Runeet (realruneett01)	**Target Tag:** v1.0.0 Production
Security Standard: Zero P0/P1 Leaks Across RLS	**Frontend Target:** 60 FPS Tree Canvas & WCAG 2.1 AA	**Build Standard:** 100% Typecheck & Turbopack 0 Errors

1. Executive Summary & Sprint Mandate

Sprint 6 is the final production release gate for FamilyVault v1.0.0. Strictly following enterprise engineering standards, this sprint prohibits new feature creation and focuses entirely on: (1) Complete system invariant and UUID parity checks between PostgreSQL and Neo4j. (2) Automated cross-tenant breach simulations and multi-tier RLS penetration audits. (3) Tree canvas 60 FPS performance benchmarking under 100+ node loads and WCAG 2.1 AA accessibility compliance. (4) Cross-device responsive audits across mobile, tablet, and desktop viewports. (5) Final production compilation, fast-forward merge from develop to main, and production release tagging.

2. Master Chronological Deliverables Sequence by Owner (Serial Dependency Chain)

Quality check-ups are executed sequentially: each gate must pass 100% before the next gate begins. Below is the exact execution chain across the entire engineering team:

Check-Up Gate & Owner	Preceding Work (Must Be Done First)	Scope & Quality Audit Executed	Output Audit Report / Artifact	Next Owner & Gate Triggered	Status
Gate 1 **Runeet** *Repo Admin & Architect*	All Sprint 1–5 feature branches merged into develop.	System invariant verification: UUID synchronization parity between PostgreSQL users.id and Neo4j Person.id; clean git index without trailing space artifacts.	verify_uuid_sync.py Canonical develop baseline	**Ayush** (Lead QA) Triggered to run master pentest suite.	**PASSED**
Gate 2 **Ayush** *Lead QA & Security*	**Gate 1** (Runeet's clean system baseline).	Comprehensive security audit: RLS Three-Tier Penetration Test, cross-DB orphan detection, biometric boundary and invariance tests (100% pass on 5/5 tests).	Certified Security Report 0 P0/P1 vulnerabilities	**Anushka** (Frontend Perf) Triggered to benchmark tree canvas.	**PASSED**
Gate 3 **Anushka** *Frontend Performance*	**Gate 2** (Ayush's security clearance).	Tree canvas 60 FPS rendering benchmark under 100+ node loads, WCAG 2.1 AA accessibility audit (@axe-core/playwright), and zero layout shifts on pan/zoom.	tree-canvas.perf.ts 0 Accessibility Violations	**Raghuvendra** (Cross-Device) Triggered for responsive validation.	**PASSED**
Gate 4 **Raghuvendra** *Cross-Device UI Lead*	**Gate 3** (Anushka's performance benchmark pass).	Responsive validation across mobile, tablet, and desktop viewports (375px, 768px, 1280px, 1920px), verifying living character auth, media inbox, and nuclear dashboard.	Cross-Device Verification Log All 9 Routes Responsive	**Riya & Ayushman** (Services) Triggered for health checks.	**PASSED**
Gate 5 **Riya & Ayushman** *Microservices Leads*	**Gate 4** (Frontend validation sign-off).	Service resilience checks: graph shortest-path query execution ≤ 15ms, biometrics memory profiling during multi-face embedding extraction, and graceful offline fallback.	Microservice Health Reports :8001 & :8002 Operational	**Runeet** (Repo Admin) Triggered for final release gate.	**PASSED**
Gate 6 **Runeet** *Lead Architect & Admin*	**Gates 1 to 5** (100% sign-off across all engineering teams).	Final Production Release Gate: Turbopack production build compilation (npm run build), full backend test suite execution, fast-forward merge develop -> main, and tag v1.0.0.	Production Tag v1.0.0 Vercel & Railway Deployment	**FAMILYVAULT LIVE** Ready for Production Users	**PASSED**

3. Production Release Gate Certification

Final Release Verdict: 100% PASSED. All system contracts, tests, security policies, and performance benchmarks have satisfied production standards. Authorization granted to tag **v1.0.0** and deploy.
Signed and Released: Runeet (Lead System Architect, FamilyVault)
